Test Questions	_____ / 24
Extension Questions	_____ / 3

## Section A: Test Questions (24 Marks)

### Question 1 (4 marks)

Tick whether the following statements are **True** or **False**.

Statement	True	False
a. A function's domain will always be its maximal domain. <span style="border: 1px solid red; padding: 2px;">It can a subset of that.</span>		<span style="border: 1px solid red; padding: 2px;">✓</span>
b. The expression inside a square root can only be positive. <span style="border: 1px solid red; padding: 2px;">It can be 0 as well.</span>		<span style="border: 1px solid red; padding: 2px;">✓</span>
c. All hybrid functions must "join together", i.e., be continuous.		<span style="border: 1px solid red; padding: 2px;">✓</span>
d. $f: D \rightarrow R, f(x) = x^2 + 4$ has a range of $R$ .		<span style="border: 1px solid red; padding: 2px;">✓</span>
e. A function and its inverse are always symmetrical around $y = x$ .	<span style="border: 1px solid red; padding: 2px;">✓</span>	
f. A relation needs to be one to one, for it to have an inverse relation.		<span style="border: 1px solid red; padding: 2px;">✓</span>
g. A function needs to be one to one, for it to have an inverse function.	<span style="border: 1px solid red; padding: 2px;">✓</span>	
h. Instead of equating $f(x)$ with its inverse to find the intersection between $f(x)$ and $f^{-1}(x)$ , we can equate $f(x)$ to $y = x$ most of the time.	<span style="border: 1px solid red; padding: 2px;">✓</span>	

Space for Personal Notes

**Question 2** (4 marks)

State the implied domain and range for each of the relations below.

a.  $y = 1 - \sqrt{1 - x}$ . (2 marks)

---

---

---

---

---

$$x \leq 1, y \leq 1$$

b.  $y = \sqrt{x^2 + 2x + 1}$ . (2 marks)

---

---

---

---

---

---

---

$$x \in R, y \geq 0$$

Space for Personal Notes

**Question 3** (6 marks)

A function  $g(x)$  is defined as,

$$g(x) = \begin{cases} x^3 + 1, & x \leq 0 \\ (x - 2)^2 - 1, & 0 < x < 3 \\ 3, & x \geq 3 \end{cases}$$

- a. Draw the graph of  $y = g(x)$  on the axes below. (3 marks)

Beware of closed and open circles.

- b. State the number of solutions to  $g(x) = -\frac{1}{2}$ . (1 mark)

3

- c. State the range of  $g(x)$ . (1 mark)

Range  $g: (-\infty, 3]$ .

- d. Solve the equation  $g(x) = 3$ . (1 mark)

$x \geq 3$   
NOTE:  $x \neq 0$

**Question 4** (10 marks)

Consider the function  $f: [0, a] \rightarrow \mathbb{R}, f(x) = -(x - 2)^2 + 4$ .

- a. Find the largest value of  $a$  such that the inverse function  $f^{-1}$  exists. (1 mark)

$$a = 2$$

- b. State the domain and range of the inverse of  $f$ . (2 marks)

Domain:  $(f^{-1}) = [0, 4]$   
Range:  $(f^{-1}) = [0, 2]$

- c. Determine the equation of the inverse function  $f^{-1}$ . (3 marks)

1 mark: Swapping  $x$  and  $y$  for inverse

1 mark: Finding the equation with +

1 mark: Justifying the rejection

$$f[x_] := -(x - 2)^2 + 4$$

**Solve**[ $f[y] == x, y$ ]

[풀이 함수]

$$\{ \{y \rightarrow 2 - \sqrt{4 - x}\}, \{y \rightarrow 2 + \sqrt{4 - x}\} \}$$

(\* Reject 2+ because the range is  $[0, 2]$  (less than equal to 2)\*)

- d. The graph of  $f$  is shown on the graph below. On the same set of axes, sketch accurately the graph of the inverse of  $f$ . (3 marks)

- e. Find an intersection point between  $f$  and  $f^{-1}$ . (1 mark)

---

---

(0,0)

---

---

**Section B: Extension Questions (3 Marks)**

**Question 5 (3 marks)**

Consider the function below.

$$f: [0,3] \rightarrow \mathbb{R}, f(x) = x^2 - 6x + k, \text{ where } k > 0$$

Find the value(s) of  $k$  such that  $f$  and  $f^{-1}$  never intersect.

1 mark for finding the turning point  
1 mark for  $k - 9 > 3$   
1 mark for  $k > 12$
