VCE Mathematical Methods $\frac{3}{4}$
Functions & Relations [1.1]
Workbook

Outline:

Domain of Functions

Pg 02-10

- Maximal Domains
- Domain of Sum, Difference, and Product of Functions

Composite Functions

Pg 11-23

- Basics of Composition
- Validity of Composite Functions
- Domain of Composite Functions
- Range of Composite Functions

Inverse Functions

Pg 24-40

- Basics of Inverses
- Swapping x and y
- Symmetry Around $y = x$
- Validity of Inverse Function
- Intersection Between Inverses
- Composition of Inverses

Section A: Domain of Functions

Sub-Section: Maximal Domains

Functions and Relations

➤ Our topics today:

1. Domain

2. Composite Functions

3. Inverse Functions

➤ None of these can be understood without being able to find a domain of a function.

➤ Today's class will get progressively harder so be sure to ask questions when you have.

Starting with domain!

Maximal Domain

➤ **Definition:** The largest possible set of input values (elements of the domain) for which the function is well-defined.

➤ **Three Important Rules:**

Functions	Maximal Domain
\sqrt{z}	$z \geq 0$
$\log(z)$	$z > 0$
$\frac{1}{z}$	$z \neq 0$

Steps

1. Find the restriction of the inside.
2. Sketch the graph if needed.
3. Solve for domain.

Let's have a look at a question together!

Question 1 Walkthrough.

Find the maximal domain of each of the following functions.

a. $f(x) = 3\sqrt{4x+3} - 2$

$$4x+3 \geq 0$$

$$x \geq -\frac{3}{4}$$

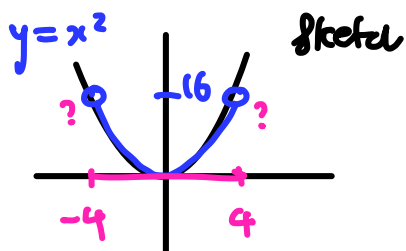

b. $h(x) = \log_2(-x^2 + 16)$

$$-x^2 + 16 > 0$$

$$-x^2 > -16$$

$\mu=1$

$$x^2 < 16$$

$$x^2 = 16$$

$$x \neq \pm 4$$

$$x \in (-4, 4)$$

Active Recall: Steps to Find Maximal Domain

1. Find the restriction of the inside.
2. Sketch the graph if needed.
3. Solve for domain

Your turn!

Question 2

Find the maximal domain of the following functions.

a. $f(x) = -\sqrt{-2x - 4} + 1$

$$-2x - 4 \geq 0$$

$$-2x \geq 4$$

$$x \leq -2$$

b. $\frac{1}{x^2 - 9}$

$$x^2 - 9 \neq 0$$

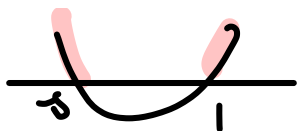

$$x^2 \neq 9$$

$$x \in \mathbb{R} \setminus \{-3, 3\}$$

c. $h(x) = -\log_2(x^2 + 4x - 5)$

$$x^2 + 4x - 5 > 0$$

$$(x+5)(x-1) > 0$$

$$x \in (-\infty, -5) \cup (1, \infty)$$

Question 3 Extension.

State the maximal domain of the following function.

$$y = \frac{1}{\sqrt{x^2 + 3x + 2}}$$

$$x^2 + 3x + 2 > 0$$

$$(x+2)(x+1) > 0$$

$$x \in (-\infty, -2) \cup (-1, \infty)$$

Space for Personal Notes

Sub-Section: Domain of Sum, Difference, and Product of Functions

What about a domain of the sum of two functions?

Analogy: Students

- Consider two students with different availabilities:

Student	Function	Availability
Raj	f	10 A. M. – 2 P. M.
Rithwik	g	11 A. M. – 5 P. M.

- When can these two meet?

$$f + g : [1, 2]$$

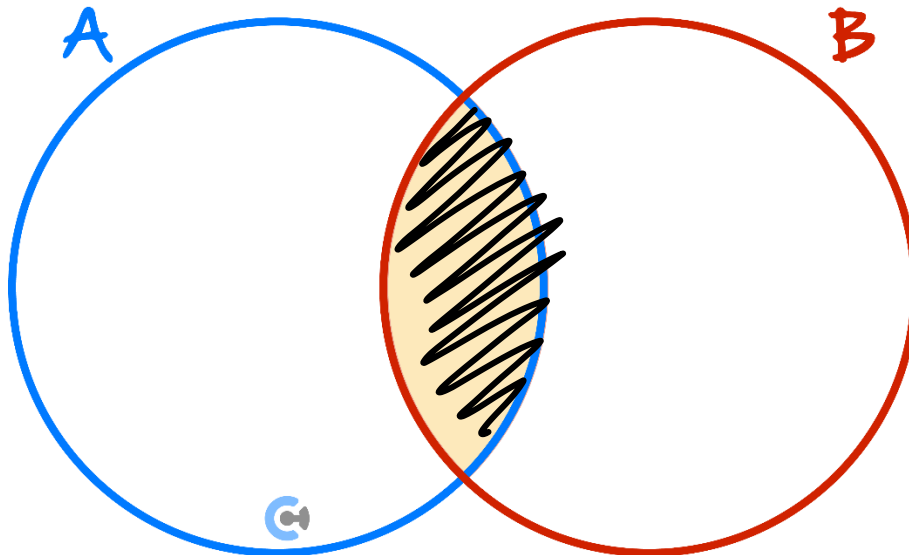

Intersection

Meeting	$f + g$	
---------	---------	--

This is the same as finding the domain of the sum of two functions!

Exploration: Domain of Sum, Differen

- If the domain of f is A and the domain of g is B , what would be the domain of $f + g$?

- For $f + g$ to be defined, do both f and g be defined? [Yes] / [No]
- How can both f and g be defined? (Hint: Look at the diagram above.)

$$\text{Dom } f + g = \underline{\text{Dom } f \cap \text{Dom } g}$$

- Will this work for $f - g$? [Yes] / [No]
- Will this work for $f \times g$? [Yes] / [No]
- Will this work for $\frac{f}{g}$? [Yes] / [No]

Discussion: Why not for $\frac{f}{g}$?

$$\text{Dom } f \cap \text{Dom } g \cap \{x : g(x) \neq 0\}$$

Sums, Differences, and Products of Functions

➤ Rules:

$$(f + g)(x) = f(x) + g(x)$$

$$(f - g)(x) = f(x) - g(x)$$

$$(f \times g)(x) = f(x) \times g(x)$$

➤ Idea:

*Domain of sum or product of two functions =
Intersection of the two domains*

➤ Steps:

1. Find the domain of each function
2. Find the intersection (draw number line if needed)

Let's look at some questions together!

Question 4 Walkthrough.

Find the maximal domain of the following function:

$$g(x) = \sqrt{x-4} + \log_3(10-x)$$

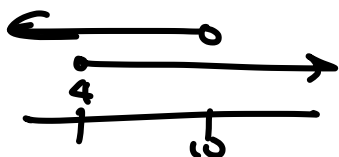

$$x-4 \geq 0$$

$$10-x > 0$$

$$x \geq 4$$

$$10 > x$$

$$[4, \infty) \cap (-\infty, 10)$$

$$x \in [4, 10)$$

TIP: Read the inequalities out loud to avoid making mistakes!

Recall!

Active Recall: To find the maximal domain we

- Find the domain of each function
- Find the integers of the function domains

Your turn!

Question 5

Find the maximal domain of each of the following functions.

a. $\sqrt{10-x} + \frac{-1}{x-4}$

$$\begin{aligned} 10-x &\geq 0 & x-4 &\neq 0 \\ 10 &\geq x & x &\neq 4 \end{aligned}$$

$$x \in (-\infty, 10] \setminus \{4\} = (-\infty, 4) \cup (4, 10]$$

b. $\log_3(x^2-4) + \frac{3}{x^2-1}$

$$\begin{aligned} x^2-4 &> 0 & x^2-1 &\neq 0 \\ x &\neq \pm 2 & x &\neq \pm 1 \end{aligned}$$

$$x \in (-\infty, -2) \cup (2, \infty)$$

Question 6 Extension.

State the maximal domain of the following function.

$$y = \sqrt{4-x} - \log_3 \left(\frac{1}{x+4} \right)$$

$$4-x \geq 0$$

$$4 \geq x$$

$$x \in (-\infty, 4]$$

$$\frac{1}{x+4} > 0.$$

$$\therefore x \in (-4, \infty)$$

$$x \in (-4, 4]$$

Key Takeaways

- ✓ Inside of a log > 0 .
- ✓ Inside of a root ≥ 0 .
- ✓ Denominator $\neq 0$.
- ✓ Domain of sum or product of two functions = Intersection of the two domains.

Space for Personal Notes

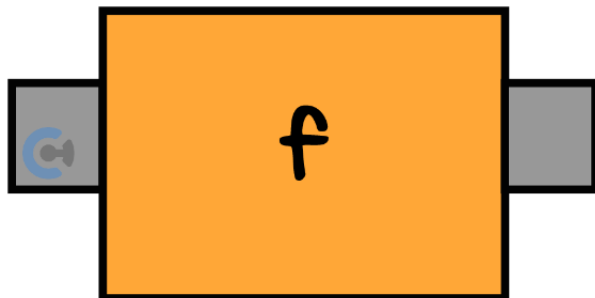

Section B: Composite Functions

Sub-Section: Basics of Composition

Analogy: Function and Machines

► Functions can be thought of as a simple machine.

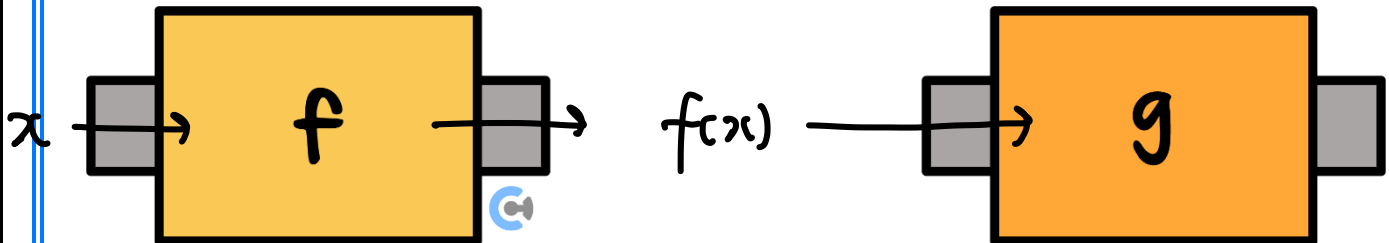

- Takes an input.
- Performs some operation on that input.
- Returns an output.

Space for Personal Notes

What would happen if we stacked two functions one after another?

Composite Functions

➤ Definition: A series of functions.

➤ Representation of the Above:

$$y = g(f(x)) = g \circ f(x)$$

NOTE: Inside Function = 1st function in the series.

Try this question!

Question 7

Consider two functions $f(x) = 2x + 1$ and $g(x) = x^2$ performed in order. That is, the **output from f becomes the input of g** .

a) $g(f(x))$:

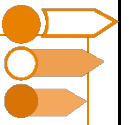

b) What would be the output of the combined function if the initial input is $x = 4$?

$$a) g(f(x)) = g(2x+1) = (2x+1)^2$$

$$b) g(f(4)) = (8+1)^2 = 81$$

Sub-Section: Validity of Composite Functions

Do composite functions work all the time?

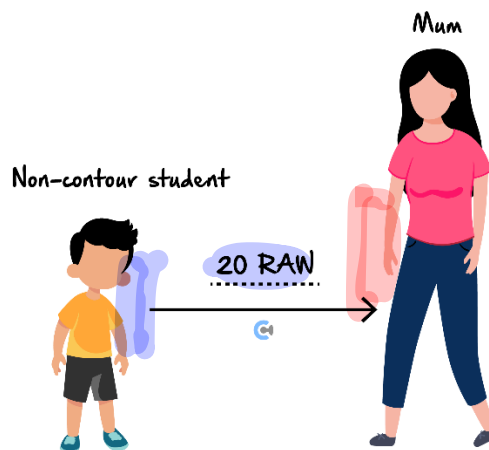

Analogy: Non-Contour Student Getting a 20 Raw.

- Let's consider a Non-Contour student giving their study score to their mum.
- Their mum is only willing to accept [40 Raw, 50 Raw]

Mum: *"Anything below is outside my domain!"*

- What would happen if the Non-Contour student gave their 20 Raw to their mum?

- Would this composition work? [Yes] **[No]**

RIP Non-Contour Student

Space for Personal Notes

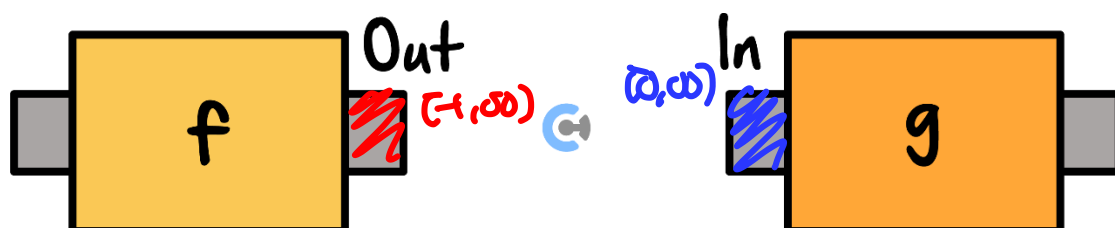

Let's turn the above analogy into a mathematical one!

Exploration: Validity of Composition Function.

► Consider $g(f(x))$ for the following functions:

$$f: R \rightarrow R, f(x) = x^2 - 1$$

$$g: [0, \infty) \rightarrow R, g(x) = \sqrt{x}$$

What range of values does $f(x)$ produce?

$(-1, \infty)$

What range of values can $g(x)$ accept?

$[0, \infty)$

So, can $g(x)$ take in **everything** that is outputted by $f(x)$?

[Yes] / [No]

Hence, can this composite function exist?

[Yes] / [No]

Space for Personal Notes

Validity of Composite Functions

- Output of $f(x)$: Range of Inside (Label Above)
- Input of $g(x)$: Dom of Outside (Label Above)

- Composite Function is only valid if:

Range of Inside \subseteq Dom of Outside
 Subset = "part of".

- Acronym:

RIDO

Space for Personal Notes

Let's look at some questions together!

Question 8 Walkthrough.

Consider the functions $f(x) = x^2 - 4$ and $g(x) = \log_e(x)$ defined over their maximal domain.

a. Does $f(g(x))$ work?

$$\text{Range } g \subseteq \text{Dom } f \quad \text{OR IDO.}$$

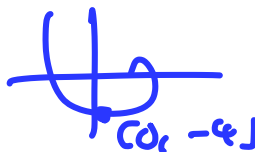

$$\mathbb{R} \subseteq \mathbb{R}$$

$$\therefore f(g(x)) \text{ exists}$$

b. Does $g(f(x))$ work?

$$\text{Range } f \not\subseteq \text{Dom } g$$

$$[-4, \infty) \not\subseteq (0, \infty)$$

$$\therefore g(f(x)) \text{ doesn't work}$$

$$g \circ f$$

Space for Personal Notes

Your turn!

Question 9

Consider the functions $f(x) = x^3$ and $g(x) = 3^x - 1$ defined over their maximal domain.

a. Does $f(g(x))$ work?

Range $g \subseteq \text{Dom } f$

$(-1, \infty) \subseteq \mathbb{R}$

$\therefore f \circ g$ works

b. Does $g(f(x))$ work?

Range $f \subseteq \text{Dom } g$
 $\mathbb{R} \subseteq \mathbb{R}$

$\therefore g \circ f$ works

Space for Personal Notes

Question 10 Extension.

Consider the functions $f(x) = \sqrt{x+4}$ and $g(x) = x^2 - a$ defined over their maximal domain.

Given that $f(g(x))$ is defined, state the largest value of a .

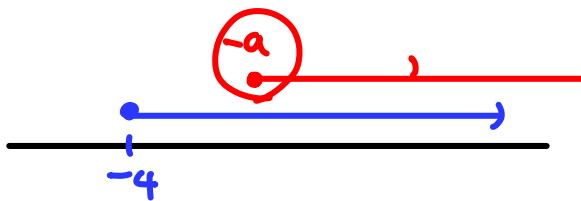

• Range $g \subseteq \text{Dom } f$

$$(-a, \infty) \subseteq [-4, \infty)$$

$$-4 \leq -a$$

$$4 \geq a$$

$$a = 4$$

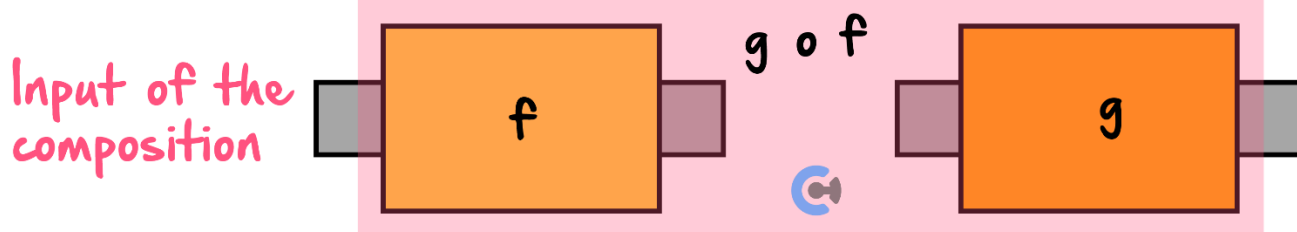

Space for Personal Notes

Sub-Section: Domain of Composite Functions

How do we find the domain of a composite function?

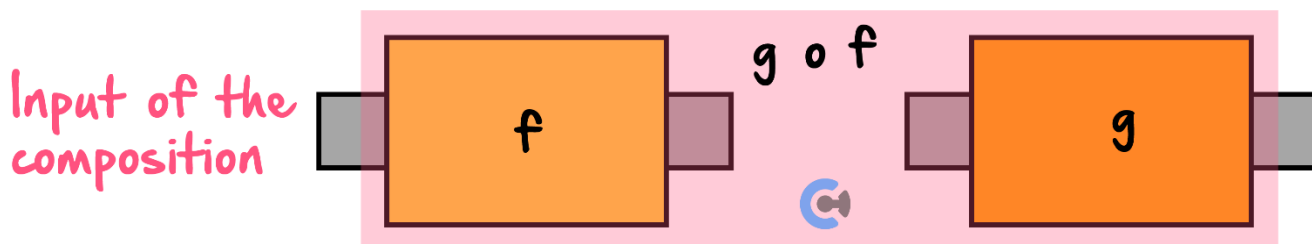

Exploration: Domain of the Composite Function

- Composite function input based on: [First] / [Second] Function
- Composite function domain based on: [First] / [Second] Function

Domain of Composite = Domain of [Inside] / [Outside]

Domain of Composite Functions

Domain of Composite = Domain of Inside

↓ If comp exists (R100 ✓)

Space for Personal Notes

Try the following question!

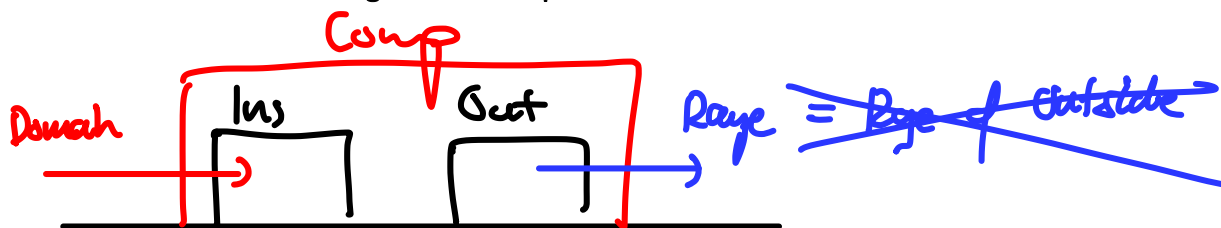

Question 11

Consider the functions $f(x) = \sqrt{x+4}$ and $g(x) = x^2 + 4$ defined over their maximal domain.

State the domain of the composite function $g(f(x))$.

$$\begin{aligned} \text{Dom } g(f(x)) &= \text{Dom } f \\ &= [-4, \infty) \end{aligned}$$

Discussion: What would the range of the composite function be then?

Space for Personal Notes

Sub-Section: Range of Composite Functions

Misconception

"The range of a composite function must be the range of the outside function."

TRUTH: The range of the composite function is a subset of the range of the outside function.

Exploration: Range of Composite Functions

➤ Consider the following diagram:

➤ Consider that: Range of f : $[0, 2]$, Domain of g : $[0, 5]$

❏ Does the composite function work? [Yes] / [No]

❏ Does $f(x)$ give $g(x)$ every possible value $g(x)$ can take? [Yes] / [No]

❏ Does the function g in the composite function produce the entire range of g ? [Yes] / [No]

❏ Why?

1st func only gives "some of" what 2nd can take.

❏ Would the range of the composite function equal to the range of $g(x)$? [Yes] / [No]

Range Comp \subseteq Range Outside

Space for Personal Notes

Range of the Composite Functions

Range of Composite \subseteq Range of the Outside

➤ Finding the range of composition function: Use the domain and the rule, just like another function.

Your turn!

Question 12

Consider the functions:

$$f: \mathbb{R} \rightarrow \mathbb{R}, f(x) = x^2 + 4$$

$$g: \mathbb{R} \rightarrow \mathbb{R}, g(x) = x + 6$$

- a. For the composite function $g(f(x))$, state the rule and domain.

$$g(x^2+4) = x^2+4+6$$

$$= x^2+10, \quad x \in \mathbb{R}.$$

- b. State the range of $g(f(x))$.

$$y = x^2 + 10, \quad x \in \mathbb{R}$$

$$\therefore y \in [10, \infty)$$

- c. State the range of $g(x)$.

$$y = x + 6, \quad x \in \mathbb{R}$$

$$y \in \mathbb{R}$$

- d. Explain why the range of g is not the same as the range of $g \circ f$.

$g \circ f$ Range f is not the entire domain of g

Discussion: To make *Range Comp* = *Range Outside*, what must be the range of inside equal to?

Range Inside = Dom Out
Max'ed out!

Key Takeaways

✓ $f(g(x)) = f \circ g(x)$.

✓ Range (output) of Inside \subseteq Domain (Input) of Outside.

✓ Domain of Composite = Domain of Inside (1st) Function. ✓

✓ Range of Composite \subseteq Range of the Outside. ✓

Space for Personal Notes

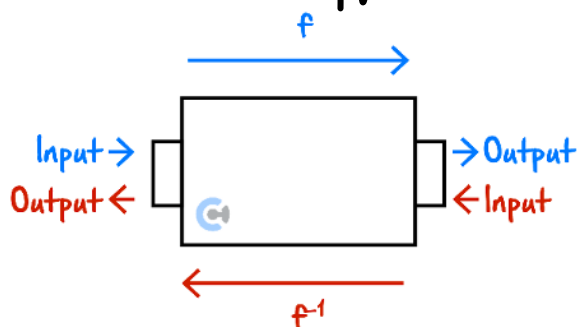

Section C: Inverse Functions

Sub-Section: Basics of Inverses

What does "Inverse" mean?

Inverse Relation

➤ Definition: Inverse is a relation which does the opposite

Discussion: What would be the inverse of $f(x) = x + 2$?

$$f^{-1}(x) = x - 2$$

Space for Personal Notes

Sub-Section: Swapping x and y

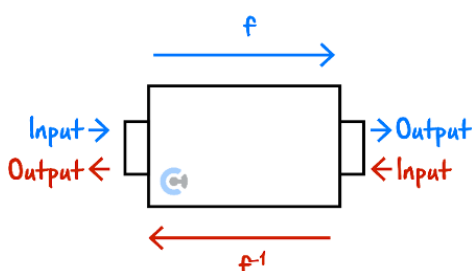

Is there a better way of solving for an inverse relation?

Solving for an Inverse Relation

➤ Swap x and y .

Question 13

Find the inverse of $f(x) = 3x - 1$ by swapping x and y .

swap x & y for inv.

$$x = 3y - 1$$

$$y = \frac{1}{3}(x + 1)$$

$$f^{-1}(x) = \frac{1}{3}(x + 1)$$

NOTE: $f(x) = y$.

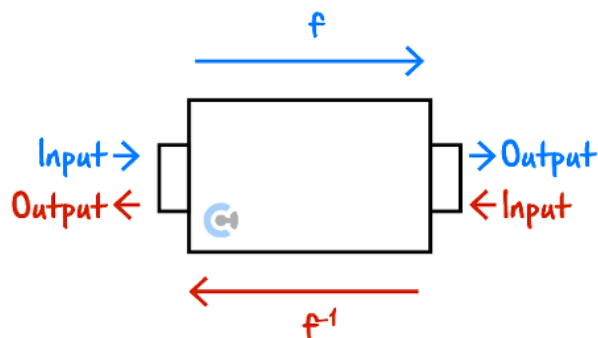

Discussion: Hence, what would happen to the domain and range of the function when we find its inverse?

Domain and Range of Inverse Functions

$$\text{Dom } f^{-1} = \text{Range } f$$

$$\text{Ran } f^{-1} = \text{Dom } f$$

Question 14 Walkthrough.

Consider the function $f(x) = \sqrt{x+2} - 1$ defined for its maximal domain.

- Find the rule for the inverse function.
- State the domain and range of the inverse function.

Space for Personal Notes

Question 15

Consider the function $f: [0, 4] \rightarrow \mathbb{R}, f(x) = 2x + 1$.

- a. Find the rule for the inverse function.

Swap x & y for inverse

$$x = 2y + 1$$

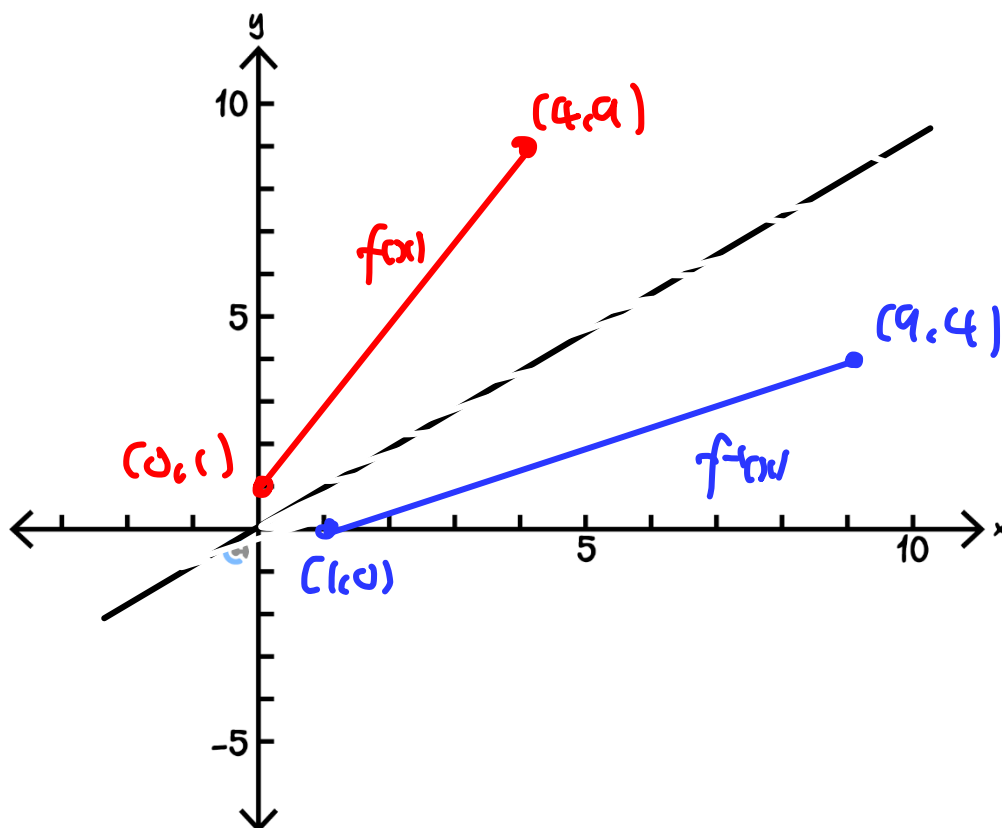

$$\frac{x-1}{2} = y \quad \therefore f^{-1}(x) = \frac{x-1}{2}$$

- b. State the domain and range of the inverse function.

$$\text{Dom} = \text{Range } f = [f(0), f(4)] = [1, 9]$$

$$\text{Range} = \text{Dom } f = [0, 4]$$

- c. Sketch the $f(x)$ and $f^{-1}(x)$ on the axis below.

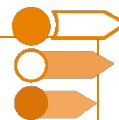

Discussion: In the previous question, which line were the two inverses symmetrical along?

$$y = x$$

Sub-Section: Symmetry Around $y = x$

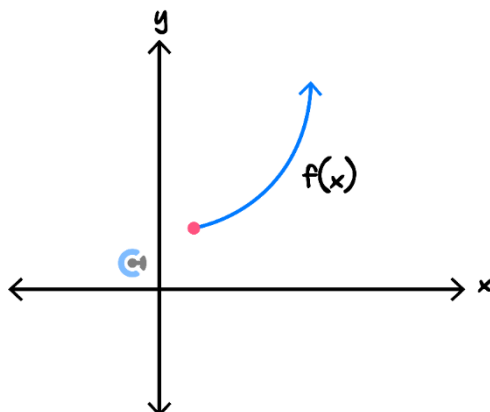

Why does this happen?

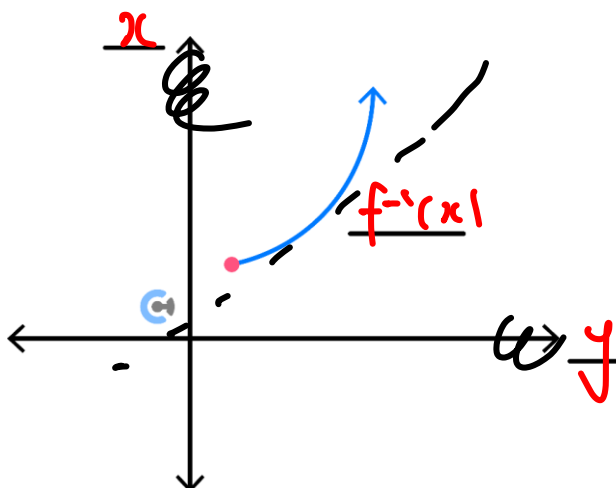

Exploration: Symmetry Around $y = x$

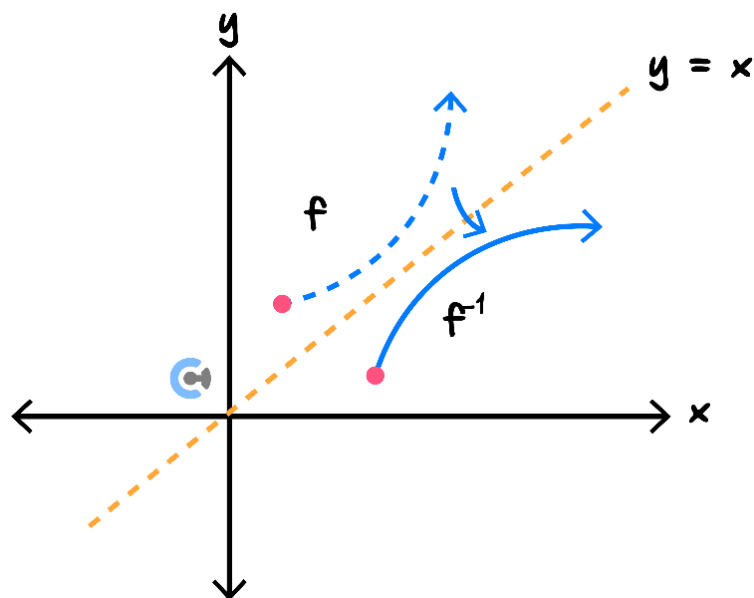

► Consider the following function:

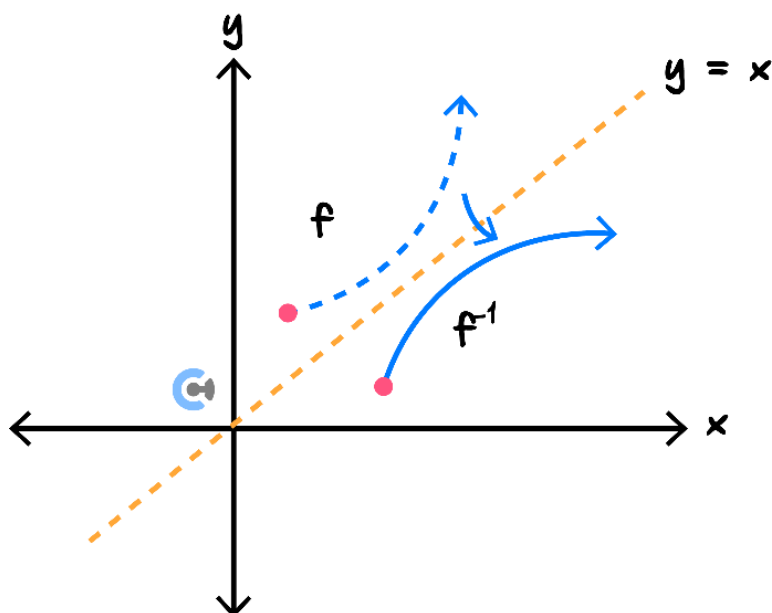

► What happens if you swap the x - and y -axis on the label on our graph?

- Wait... do we want the x -axis to be the vertical one? [Yes/No]
- How should we reflect the graph so that the x - and y -axis become horizontal and vertical again?

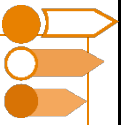

Symmetry of Inverse Functions

- Inverse functions are always symmetrical around $y = x$.

Sub-Section: Validity of Inverse Function

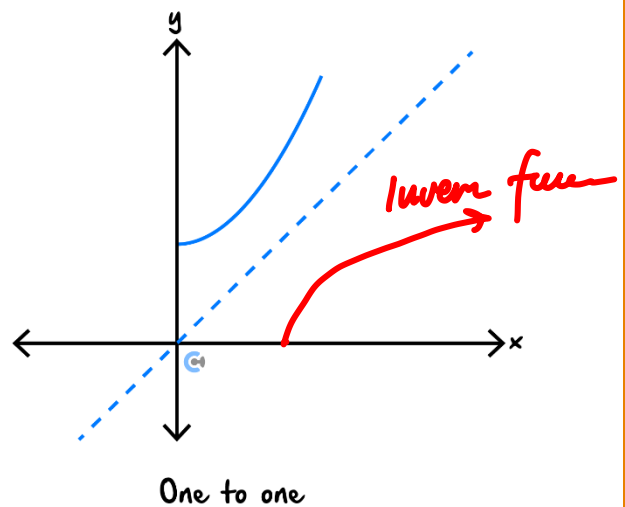

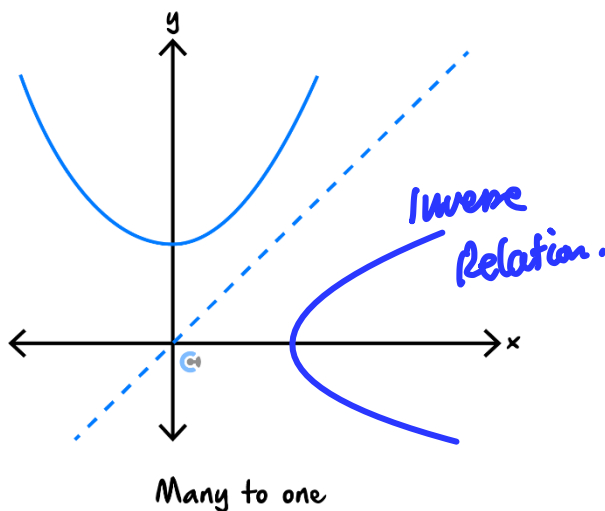

Does an inverse function always exist?

Exploration: Validity of Inverse Functions

➤ Consider the many to one and one to one functions.

🔄 Reflect them around $y = x$ and sketch the inverse! (Label Above)

🔄 Which inverse is a function? (Passes through a vertical line test?)

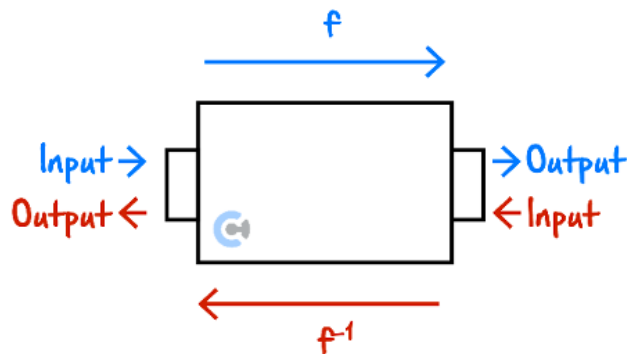

[neither] / [left] / [right] / [both]

🔄 For an inverse **function** to exist, what must the original function be? [many to one] / [one to one]

Space for Personal Notes

Validity of Inverse Functions

➤ Requirement for Inverse Function:

f needs to be 1:1 (t.p)

Question 16 Walkthrough.

Consider the function $f: (-\infty, a] \rightarrow \mathbb{R}, f(x) = 3(x-2)^2 - 4$.

- a. Find the largest possible value of a such that the ~~inverse function f^{-1} exists~~
 f is 1:1

$$a=2$$

- b. Find the inverse function rule + domain.

Swap x & y for inv.

$$x = 3(y-2)^2 - 4$$

$$\frac{x+4}{3} = (y-2)^2$$

$$\pm \sqrt{\frac{x+4}{3}} = y-2$$

$$y = 2 \pm \sqrt{\frac{x+4}{3}}$$

$$\text{Range } f^{-1} = \text{Domain } f \\ = (-\infty, 2]$$

$$f^{-1}(x) = 2 - \sqrt{\frac{x+4}{3}}$$

$$\text{Domain } f^{-1} = \text{Range } f \\ = [-4, \infty)$$

TIP: Always try sketching the function to find the domain such that an inverse function can exist!

NOTE: You will need to complete the square when finding the inverse of quadratic functions!

Your turn!

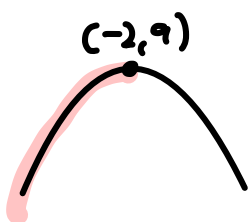

Question 17

Consider the function $g: (-\infty, b] \rightarrow \mathbb{R}, g(x) = -2x^2 - 8x + 1$.

$$\begin{aligned} & -2[x^2 + 4x] \\ & = -2[(x+2)^2 - 4] \\ & = -2(x+2)^2 + 8 \end{aligned}$$

- a. Find the largest possible value of b such that the inverse function g^{-1} exists.

$$g(x) = -2(x+2)^2 + 9$$

$$+1$$

$$b = -2$$

- b. Find the inverse function

Swap x & y for inverse

$$x = -2(y+2)^2 + 9$$

$$\frac{x-9}{-2} = (y+2)^2$$

$$\pm \sqrt{\frac{x-9}{-2}} = y+2$$

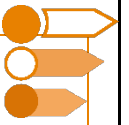

$$-2 \pm \sqrt{\frac{x-9}{-2}} = y$$

$$\begin{aligned} \text{as Range } f &= \text{Dom } f \\ &= (-\infty, 9] \end{aligned}$$

$$\therefore f^{-1}(x) = -2 - \sqrt{\frac{x-9}{-2}}$$

$$\text{Dom } f^{-1} = \text{Range } f = (-\infty, 9]$$

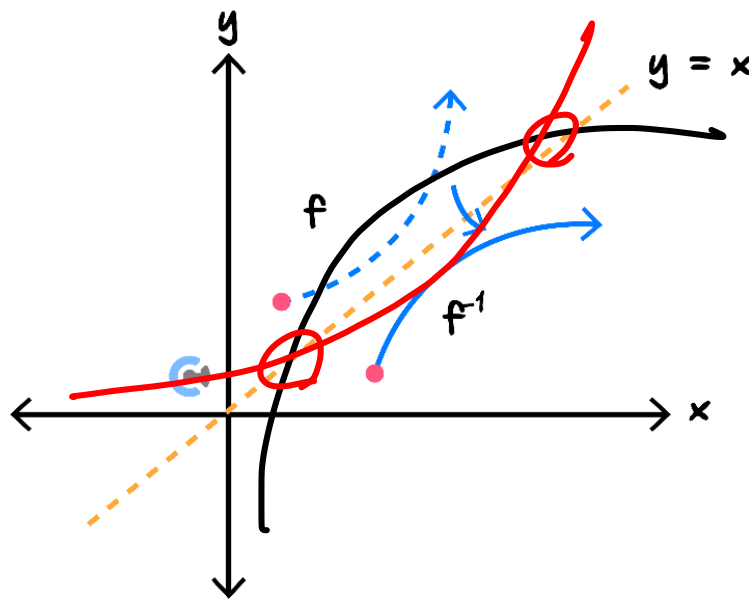

Sub-Section: Intersection Between Inverses

Where do inverses meet?

Active Recall: Symmetry Around $y = x$

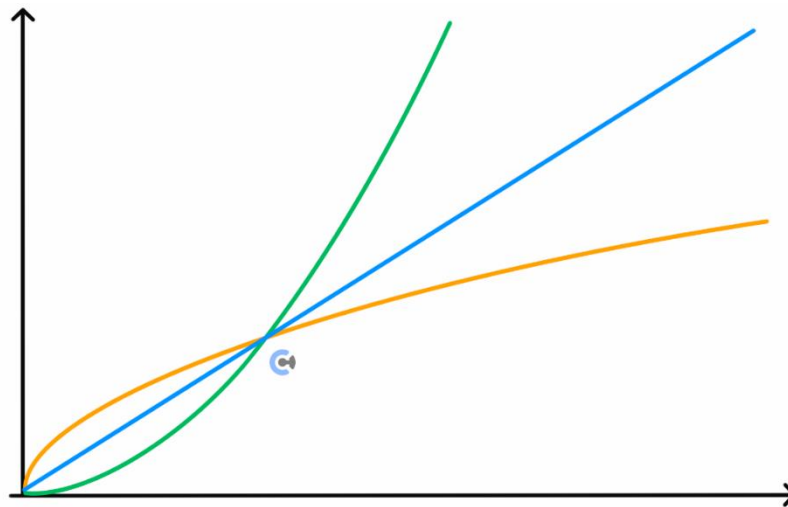

➤ Inverse functions are always symmetrical around $y = x$.

Discussion: Where could a function and its inverse meet?

Intersection Between a Function and its Inverse

Delete
↙

➤ Always equate with $y=x$ instead.

$$f(x) = x \text{ OR } f^{-1}(x) = x$$

Question 18

Find the intersection between $f: [0, \infty) \rightarrow \mathbb{R}, f(x) = x^3$ and its inverse, without finding the inverse.

$$x^3 = x$$

$$x^3 - x = 0$$

$$x(x^2 - 1) = 0$$

$$x = 0, \pm 1$$

$$x \neq -1$$

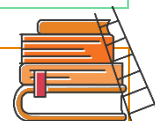

$$\text{as } x \in [0, \infty)$$

$$(0, 0), (1, 1)$$

NOTE: This only works for an increasing function, however in VCAA, this is always the case.

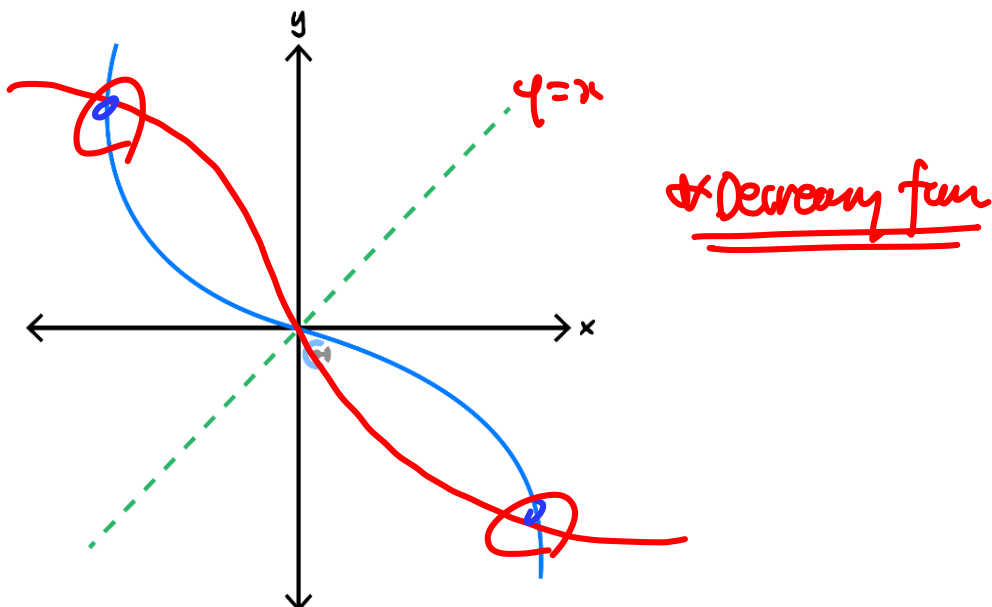

Does this always work?

Extension: Intersections Not on $y = x$ (Not Tested on Exams, but Maybe on SACs!)

► Consider the following:

What does the inverse function look like? *(Sketch Above)*

Are these intersections on $y = x$? [Yes] / **No**

ALSO NOTE: For SACs is that there **could** be intersections that are **not** on $y = x$.

Space for Personal Notes

Sub-Section: Composition of Inverses

Analogy: Inverse function is your annoying sibling.

➤ Who has siblings? Is it just me or do your siblings want to do the opposite of what you want to do?

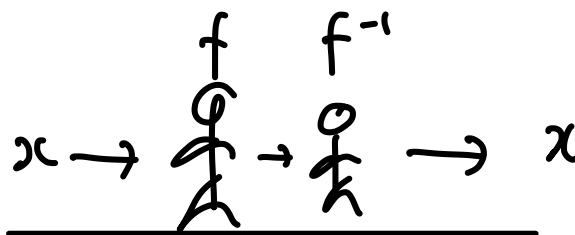

➤ Example:

Jayesh
James: Wants to turn the AC up by 5 degrees.

Adi
Danis (James' brother): Turns the AC down by 5.

This is basically an inverse function relationship!

Discussion: So, now what would happen if we have a function and its inverse happening one after another? (Composite function of inverse)

Space for Personal Notes

Composition of Inverse Functions

$$f \circ f^{-1}(x) = x, \quad \text{for all } x \in \text{Dom } f^{-1}$$

$$f^{-1} \circ f(x) = x, \quad \text{for all } x \in \text{Dom } f$$

NOTE: Domain = Domain of Inside

Try this question!

Question 19 (4 marks)

Consider the function $f(x) = \frac{1}{x-1} - 3$.

a. Find the rule and domain for $f^{-1}(f(x))$. (2 marks)

$$f^{-1}(x) = \frac{1}{x+3} + 1$$

$$f^{-1}(f(x)) = \frac{1}{f(x)+3} + 1$$

$$= \frac{1}{\frac{1}{x-1} - 3 + 3} + 1$$

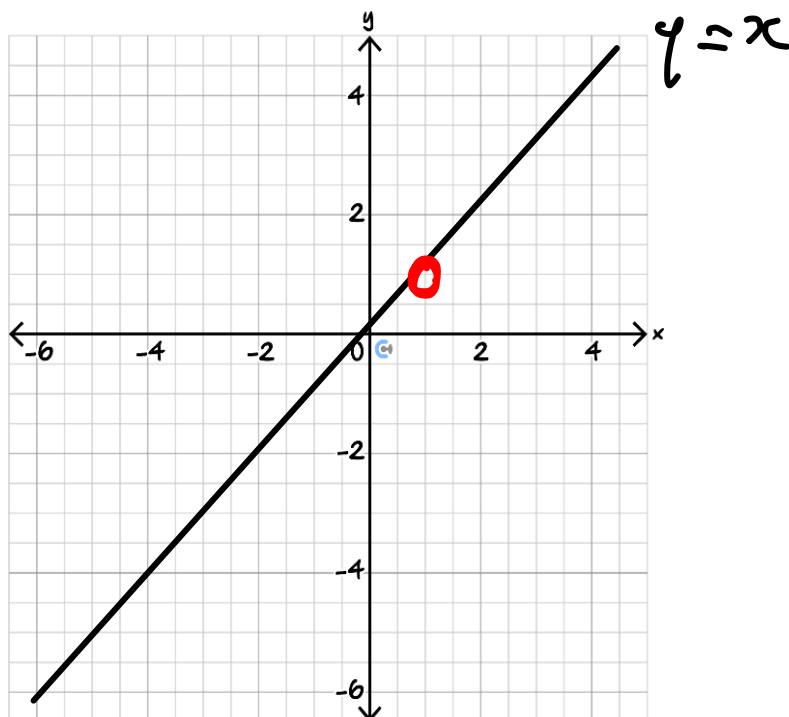

$$= \frac{1}{\frac{1}{x-1}} + 1$$

$$= x-1 + 1 = x$$

$$\text{Dom} = \text{Dom } f$$

$$= (\mathbb{R} \setminus \{1\})$$

b. Sketch the graph of $y = f^{-1}(f(x))$ on the axes below. (2 marks)

Key Takeaways

- ✓ f needs to be 1:1 for f^{-1} to exist.
- ✓ Domain and Range Swaps.
- ✓ Symmetrical around $y = x$.
- ✓ For intersections: $f(x) = x$ or $f^{-1}(x) = x$.
- ✓ Composite function of inverses is always equal to x .

Space for Personal Notes

Contour Check

Learning Objective: [1.1.1] - Find Maximal Domain and Range

Key Takeaways

- ❑ Inside of a log must be positive.
- ❑ Inside of a root must be non-negative.
- ❑ Denominator Can't be zero.
- ❑ Domain of sum or product of two functions is equal to intersection of the two domains.

Learning Objective: [1.1.2] - Find the Rule, Domain and Range of a Composite Function (Range Does Not Require Splitting to Find as the Function is Easy to Draw)

Key Takeaways

- ❑ $f(g(x)) = \underline{f} \circ \underline{g}(x)$.
- ❑ For composite function to exist, Range Inside \subseteq Dom Outside.
- ❑ Domain of Composite is equal to the Domain of Inside Function.
- ❑ Range of Composite is a subset of the Range of the Outside.

Learning Objective: [1.1.3] - Find the Rule, Domain, and Range of Inverse Functions

Key Takeaways

- f needs to be $[1:1]$ for f^{-1} to exist.
- Domain of the inverse function equals to Range of origin and vice versa.
- Symmetrical around $y=x$.
- For intersections of inverses, we can equate the function to $y=x$.

Learning Objective: [1.1.4] - Find the Composite Function of Inverse Function

Key Takeaways

- Composite function of inverses is always equal to $y=x$.
