Test Questions	_____ / 20
----------------	------------

Section A: Test Questions (20 Marks)

Question 1 (4 marks)

Tick whether the following statements are **true** or **false**.

Statement	True	False
a. De Morgan Law says that $\neg(A \vee B) = \neg A \vee \neg B$.		<input checked="" type="checkbox"/>
b. Contrapositive statement of “if you are a Contour student then you will enjoy learning maths” is given by “if you enjoy learning maths then you are a Contour student”.		<input checked="" type="checkbox"/>
It should be: If you do not enjoy learning maths then you are Not a contour student.		
c. Proof by contradiction requires assuming that the contradicting statement is true.	<input checked="" type="checkbox"/>	
d. Equivalent statement is when a statement and its converse are both true.	<input checked="" type="checkbox"/>	
e. Universal statements can be proven by simply giving an example within the set.		<input checked="" type="checkbox"/>
f. To disprove an existence statement, you prove the universal statement with the opposite conclusion.	<input checked="" type="checkbox"/>	
g. In proof by induction, you can assume that $P(1), P(2), P(3), \dots P(k)$ is true and from there, prove that $P(k) \rightarrow P(k + 1)$.		<input checked="" type="checkbox"/>
Only assume $P(k)$ is true for arbitrary k , then prove $P(k + 1)$.		
h. Induction proof can be done for when k is all real numbers.		<input checked="" type="checkbox"/>

Question 2 (4 marks)

Let $n \in \mathbb{N}$. If $5^n - 1$ is prime, then n is odd.

- a. Write down the contrapositive of the statement. (1 mark)

If n is even, $5^n - 1$ is not prime (has other factors than itself and 1).

- b. Prove that the contrapositive is true. (3 marks)

$$\begin{aligned}
 n &= 2k, k \in \mathbb{N} \\
 \text{Then } 5^n - 1 &= 5^{2k} - 1 \\
 &= (5^k)^2 - 1^2 = (5^k - 1)(5^k + 1) \\
 \therefore 5^n - 1 &\text{ has a non } 5, 1 \text{ factor} \\
 5^n - 1 &\text{ is not prime} \\
 \therefore 5^n - 1 \text{ is prime} &\Rightarrow n \text{ odd}
 \end{aligned}$$

Space for Personal Notes

Question 3 (3 marks)

Prove that if x is irrational then, $\sqrt{x+1}$ is irrational. Use the contradiction method in your proof.

Suppose $x \in \mathbb{Q}$ AND $\sqrt{x+1} \in \mathbb{Q}$

$$\sqrt{x+1} = \frac{p}{q}, \quad p, q \in \mathbb{Z} \setminus \{0\}$$

$$x+1 = \frac{p^2}{q^2}$$

$$x = \frac{p^2 - q^2}{q^2}$$

$$p^2 - q^2 \in \mathbb{Z}$$

$$q^2 \in \mathbb{Z}$$

so $x \in \mathbb{Q}$ (contradiction)

Space for Personal Notes

Question 4 (4 marks)

Prove that the following is true for all positive integers n : n is odd if and only if $3n^2 + 8$ is odd.

$$n \text{ odd} \Rightarrow 3n^2 + 8 \text{ odd}$$

$$n = 2k + 1, k \in \mathbb{Z}$$

$$\text{Then } 3n^2 + 8 = 3(2k + 1)^2 + 8$$

$$= 3(4k^2 + 4k + 1) + 8$$

$$= 12k^2 + 12k + 11$$

$$= 2(6k^2 + 6k + 5) + 1$$

But $6k^2 + 6k + 5 \in \mathbb{Z}$, so result is odd

$$3n^2 + 8 \text{ odd} \Rightarrow n \text{ odd}$$

(equivalent to $n \text{ even} \Rightarrow 3n^2 + 8 \text{ even}$)

Direct Method:
If n is even, then $n = 2k$ for some int. k .
Therefore $3n^2 + 8 = 3(2k)^2 + 8 = 12k^2 + 8$
 $= 2(6k^2 + 4)$,
which is even.

Question 5 (5 marks)

Prove that $\frac{1}{1 \times 3} + \frac{1}{3 \times 5} + \frac{1}{5 \times 7} + \dots + \frac{1}{(2n-1)(2n+1)} = \frac{n}{2n+1}$ for all $n \in \mathbb{N}$.

$$P(n): \frac{1}{1 \times 3} + \frac{1}{3 \times 5} + \dots + \frac{1}{(2n-1)(2n+1)} = \frac{n}{2n+1}$$

Base Case

$$\text{LHS} = \frac{1}{1 \times 3} = \frac{1}{3} = \frac{1}{2(1)+1} = \text{RHS}$$

$$\therefore P(1) \text{ True}$$

Induction Hypothesis: Let $k \in \mathbb{N}$ be arbitrary but fixed & assume $P(k)$ true.

$$\frac{1}{1 \times 3} + \frac{1}{3 \times 5} + \dots + \frac{1}{(2k-1)(2k+1)} = \frac{k}{2k+1}$$

Then LHS of $P(k+1)$

$$= \frac{1}{1 \times 3} + \frac{1}{3 \times 5} + \dots + \frac{1}{(2k-1)(2k+1)} + \frac{1}{(2k+1)(2k+3)}$$

$$= \frac{k}{2k+1} + \frac{1}{(2k+1)(2k+3)} \quad \text{by assumption}$$

$$= \frac{k(2k+3) + 1}{(2k+1)(2k+3)}$$

$$= \frac{2k^2 + 3k + 1}{(2k+1)(2k+3)}$$

$$= \frac{(2k+1)(k+1)}{(2k+1)(2k+3)}$$

$$= \frac{k+1}{2(k+1)+1} = \text{RHS}$$

$P(k) \Rightarrow P(k+1)$

Free 1-on-1 Consults

What Are 1-on-1 Consults?

- **Who Runs Them?** Experienced Contour tutors (45 + raw scores and 99 + ATARs).
- **Who Can Join?** Fully enrolled Contour students.
- **When Are They?** 30-minute 1-on-1 help sessions, after school weekdays, and all-day weekends.
- **What To Do?** Join on time, ask questions, re-learn concepts, or extend yourself!
- **Price?** Completely free!
- **One Active Booking Per Subject:** Must attend your current consultation before scheduling the next. :)

SAVE THE LINK, AND MAKE THE MOST OF THIS (FREE) SERVICE!
