Supplementary Questions	Pg 20 - Pg 32

## Section A: Compulsory Questions

### Sub-Section [4.2.1]: Using Matrices for Linear Transformations

#### Question 1

For each of the following, write the transformation matrix for the given mapping.

a.  $(x, y) \rightarrow (2x + 3y, 4x + 5y)$

---

---

---

b.  $(x, y) \rightarrow (-x + 4y, 6x - 2y)$

---

---

---

c.  $(x, y) \rightarrow (7x - 3y, -5x + 8y)$

---

---

---

Space for Personal Notes

**Question 2**

- a. Find the image of the point  $(3, -2)$  under the transformation matrix:

$$T = \begin{bmatrix} 4 & 1 \\ -2 & 3 \end{bmatrix}$$

---

---

---

- b. Find the image of the point  $(-1, 5)$  under the transformation matrix:

$$T = \begin{bmatrix} -2 & 3 \\ 1 & 4 \end{bmatrix}$$

---

---

---

- c. Find the image of the point  $(4, 3)$  under the transformation matrix:

$$T = \begin{bmatrix} 5 & -1 \\ 2 & 6 \end{bmatrix}$$

---

---

---

Space for Personal Notes

**Question 3**

- a. A unit square with vertices  $(0,0)$ ,  $(1,0)$ ,  $(0,1)$  and  $(1,1)$  is transformed into a parallelogram with vertices  $(0,0)$ ,  $(4,1)$ ,  $(2,3)$  and  $(6,4)$ . Find a possible transformation matrix  $T$ .

---

---

---

---

---

- b. Verify that the transformation matrix correctly maps  $(1,1)$  to  $(6,4)$ .

---

---

---

- c. Compute the area of the transformed parallelogram.

---

---

---

**Space for Personal Notes**

**Question 4 Tech-Active.**

Find the image of the point  $(2, -4)$  under the transformation matrix:

$$T = \begin{bmatrix} -3 & 2 \\ 2 & 4 \end{bmatrix}$$

---

---

---

---

Space for Personal Notes

## Sub-Section [4.2.2]: Dilations, Reflections, Shears and Projections

### Question 5

- a. Write the transformation matrix for a dilation by a factor of  $k = 3$  in both the  $x$  and  $y$ -directions.

---

---

---

- b. Write the transformation matrix for a reflection in the  $x$ -axis.

---

---

---

- c. Write the transformation matrix for a shear in the  $x$ -direction with a shear factor of  $k = 2$ .

---

---

---

- d. Write the transformation matrix for a projection onto the  $x$ -axis.

---

---

---

- e. Use matrices to find the rule for a translation 3 units to the right and 2 units down.

---

---

---

**Question 6**

- a. Apply a reflection in the  $y$ -axis to the point  $(3, -2)$ .

---

---

---

---

- b. Apply a shear in the  $x$ -direction with shear factor  $k = 2$  to the point  $(4, 1)$ .

---

---

---

---

- c. Apply a projection onto the  $x$ -axis to the point  $(-2, 5)$ .

---

---

---

---

**Question 7**

- a. The point  $(4,2)$  is mapped to  $(-4,2)$ . Find a transformation matrix that achieves this.

---

---

---

---

- b. The point  $(3,-1)$  is mapped to  $(7,-1)$ . Find a transformation matrix that achieves this.

---

---

---

---

- c. The point  $(-2,5)$  is mapped to  $(-2,0)$ . Find a transformation matrix that achieves this.

---

---

---

---

**Space for Personal Notes**

## Sub-Section [4.2.3]: Inverse Transformations

### Question 8

- a. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (2x + 3y, 4x + 5y)$$

---

---

---

---

- b. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (-x + 4y, 6x - 2y)$$

---

---

---

---

- c. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (7x - 3y, -5x + 8y)$$

---

---

---

---

**Question 9**

- a.** The transformation matrix:

$$T = \begin{bmatrix} 3 & 2 \\ 1 & 4 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(10, 6)$ . Find  $(x, y)$ .

---

---

---

---

---

---

- b.** The transformation matrix:

$$T = \begin{bmatrix} 5 & -3 \\ 2 & 7 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(4, 11)$ . Find  $(x, y)$ .

---

---

---

---

---

---

c. The transformation matrix:

$$T = \begin{bmatrix} 6 & 2 \\ -3 & 5 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(12, 7)$ . Find  $(x, y)$ .

---

---

---

---

---

---

---

### Question 10

a. A transformation maps the points:

$$(1, 2) \rightarrow (5, 4), \quad (3, -1) \rightarrow (7, 6)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

---

---

**b.** A transformation maps the points:

$$(2,1) \rightarrow (6,5), \quad (1,3) \rightarrow (4,2)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

**c.** A transformation maps the points:

$$(3,2) \rightarrow (9,7), \quad (0,5) \rightarrow (2,10)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

**Question 11 Tech-Active.**

A transformation matrix:

$$T = \begin{bmatrix} -2 & 3 \\ 1 & 4 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(10, 6)$ . Find  $(x, y)$ .

---

---

---

---

## Sub-Section [4.2.4]: Composite Transformations

### Question 12

A transformation consists of:

- ▶ A reflection in the  $x$ -axis.
- ▶ A shear in the  $x$ -direction with shear factor  $k = 3$ .

a. Find the composite transformation matrix.

---

---

---

---

b. Find the image of  $(4, 2)$  under this transformation.

---

---

---

Space for Personal Notes

**Question 13**

A transformation consists of:

- A dilation by a factor of 2 from both the  $x$  and  $y$ -axes.
- A reflection in the  $y$ -axis.

**a.** Find the composite transformation matrix.

---

---

---

---

**b.** Find the image of  $(-3, 5)$  under this transformation.

---

---

---

**Space for Personal Notes**

### Question 14

A transformation consists of:

- ▶ A reflection in the  $x$ -axis.
- ▶ A shear in the  $y$ -direction with shear factor  $k = 2$ .
- ▶ A projection onto the  $x$ -axis.

a. Find the composite transformation matrix.

---

---

---

---

---

---

b. Find the image of  $(3, -2)$  under this transformation, followed by a translation 1 unit right and 3 units down.

---

---

---

Space for Personal Notes

**Question 15 Tech-Active.**

The point  $(3, 4)$  is the image of a point  $(x, y)$  after the transformations  $T$  and then  $S$  have been applied in that order. The transformation matrices are:

$$T = \begin{bmatrix} -1 & 3 \\ 1 & 2 \end{bmatrix} \text{ and } S = \begin{bmatrix} 2 & -3 \\ 1 & 4 \end{bmatrix}$$

Find the original point  $(x, y)$ .

---

---

---

---

---

---

Space for Personal Notes

## Sub-Section: The 'Final Boss'

### Question 16

A company is designing a robotic arm that manipulates objects in a 2D workspace. The workspace is represented by the  $xy$ -plane, and transformations are applied using matrices. The arm operates on a unit square with initial vertices at  $A(0,0)$ ,  $B(1,0)$ ,  $C(0,1)$ , and  $D(1,1)$ .

a. The robotic arm first applies:

-  A shear in the  $x$ -direction with shear factor  $k = 2$ .
-  A reflection in the  $y$ -axis.

Find the composite transformation matrix  $T$ .

---

---

---

---

b. Apply the transformation matrix  $T$  to the original unit square. Find the coordinates of the transformed points  $A'$ ,  $B'$ ,  $C'$ ,  $D'$ .

---

---

---

---

c. Find the area of the transformed shape. Does the transformation preserve area?

---

---

---

**d. Inverse transformation.**

The robotic arm must reverse the transformation to return the shape to its original position. Find the inverse transformation matrix  $T^{-1}$ , if it exists.

---

---

---

---

**e. Alternative transformations.**

Instead of the previous transformation, the arm now applies:

-  A dilation by a factor of 3 in both the  $x$ - and  $y$ -directions.
-  A projection onto the  $x$ -axis.

Find the new composite transformation matrix  $T'$ .

---

---

---

---

**f. Calculate the area of the transformed shape under this new transformation. Compare it to the original and explain the result.**

---

---

---

**Space for Personal Notes**

## Section B: Supplementary Questions

### Sub-Section [4.2.1]: Using Matrices For Linear Transformations

#### Question 17

For each of the following, write the transformation matrix for the given mapping:

a.  $(x, y) \rightarrow (3x - 2y, 5x + 4y)$

---

---

---

b.  $(x, y) \rightarrow (6x + y, -x + 3y)$

---

---

---

c.  $(x, y) \rightarrow (-2x + 4y, 7x - 5y)$

---

---

---

Space for Personal Notes

**Question 18**

- a. Find the image of the point  $(2, -3)$  under the transformation matrix:

$$T = \begin{bmatrix} 5 & 2 \\ -3 & 4 \end{bmatrix}$$

---

---

---

- b. Find the image of the point  $(-2, 4)$  under the transformation matrix:

$$T = \begin{bmatrix} -1 & 3 \\ 2 & 5 \end{bmatrix}$$

---

---

---

- c. Find the image of the point  $(3, 2)$  under the transformation matrix:

$$T = \begin{bmatrix} 4 & -2 \\ 3 & 6 \end{bmatrix}$$

---

---

---

Space for Personal Notes

**Question 19**

- a. A unit square with vertices  $(0,0)$ ,  $(1,0)$ ,  $(0,1)$ , and  $(1,1)$  is transformed to a parallelogram with vertices  $(0,0)$ ,  $(3,2)$ ,  $(4,1)$ , and  $(7,3)$ . Find a possible transformation matrix  $T$ .

---

---

---

---

---

- b. Verify that the transformation matrix correctly maps  $(1,1)$  to  $(7,3)$ .

---

---

---

- c. Compute the area of the transformed parallelogram.

---

---

---

**Space for Personal Notes**

## Sub-Section [4.2.2]: Dilations, Reflections, Shears, and Projections

### Question 20

- a. Write the transformation matrix for a dilation by a factor of  $k = 4$  in both the  $x$ - and  $y$ -directions.

---

---

---

- b. Write the transformation matrix for a reflection in the  $y$ -axis.

---

---

---

- c. Write the transformation matrix for a shear in the  $y$ -direction with shear factor  $k = 3$ .

---

---

---

- d. Write the transformation matrix for a projection onto the  $y$ -axis.

---

---

---

- e. Use matrices to find the rule for a translation 5 units left and 4 units up.

---

---

---

**Question 21**

- a. Apply a reflection in the  $x$ -axis to the point  $(-5,3)$ .

---

---

---

---

- b. Apply a shear in the  $y$ -direction with shear factor  $k = 2$  to the point  $(2,3)$ .

---

---

---

---

- c. Apply a projection onto the  $y$ -axis to the point  $(6,-4)$ .

---

---

---

---

**Question 22**

- a. The point  $(-3, 2)$  is mapped to  $(3, 2)$ . Find a transformation matrix that achieves this.

---

---

---

---

- b. The point  $(1, 4)$  is mapped to  $(1, 8)$ . Find a transformation matrix that achieves this.

---

---

---

---

- c. The point  $(7, -2)$  is mapped to  $(7, 0)$ . Find a transformation matrix that achieves this.

---

---

---

---

Space for Personal Notes

## Sub-Section [4.2.3]: Inverse Transformations

### Question 23

- a. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (4x + 5y, 7x + 2y)$$

---

---

---

---

- b. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (3x - 4y, 6x + 5y)$$

---

---

---

---

- c. Find the inverse transformation matrix for the mapping:

$$(x, y) \rightarrow (2x + 6y, 5x - 3y)$$

---

---

---

---

**Question 24**

a. The transformation matrix:

$$T = \begin{bmatrix} 3 & 4 \\ -2 & 5 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(8, 7)$ . Find  $(x, y)$ .

---

---

---

---

---

---

b. The transformation matrix:

$$T = \begin{bmatrix} 5 & -3 \\ 2 & 6 \end{bmatrix}$$

Maps a point  $(x, y)$  to  $(11, 4)$ . Find  $(x, y)$ .

---

---

---

---

---

---

**Space for Personal Notes**

**Question 25**

**a.** A transformation maps the points:

$$(3,2) \rightarrow (7,5), \quad (1,-1) \rightarrow (4,2)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

---

---

**b.** A transformation maps the points:

$$(2,4) \rightarrow (10,3), \quad (-3,1) \rightarrow (5,7)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

---

---

c. A transformation maps the points:

$$(1,3) \rightarrow (8,5), \quad (2,-2) \rightarrow (4,6)$$

Find the transformation matrix  $T$ .

---

---

---

---

---

---

---

---

Space for Personal Notes

## Sub-Section [4.2.4]: Composite Transformations

### Question 26

A transformation consists of:

- ▶ A reflection in the  $x$ -axis.
- ▶ A shear in the  $y$ -direction with shear factor  $k = 3$ .

a. Find the composite transformation matrix.

---

---

---

---

b. Find the image of  $(5, -2)$  under this transformation.

---

---

---

Space for Personal Notes

**Question 27**

A transformation consists of:

- A shear in the  $y$ -direction with shear factor  $k = 4$ .
- A reflection in the  $x$ -axis.

**a.** Find the composite transformation matrix.

---

---

---

---

**b.** Find the image of  $(-1, 2)$  under this transformation.

---

---

---

**Space for Personal Notes**

**Question 28**

A transformation consists of:

- A reflection in the  $y$ -axis.
- A shear in the  $x$ -direction with shear factor  $k = 2$ .
- A dilation by a factor of 3 in both directions.

a. Find the composite transformation matrix.

---

---

---

---

---

---

b. Find the image of  $(4, -2)$  under this transformation.

---

---

---
