**MATHEMATICAL METHODS
Trial Written Examination 2**

Reading time: 15 minutes
Total writing time: 2 hours

QUESTION AND ANSWER BOOK

Structure of book

Section	Number of questions	Number of questions to be answered	Number of marks
1	22	22	22
2	5	5	58
			Total 80

- Students are permitted to bring into the examination room: pens, pencils, highlighters, erasers, sharpeners, rulers, a protractor, set-squares, aids for curve sketching, one bound reference, one approved **graphics** calculator (memory DOES NOT need to be cleared) and, if desired, one scientific calculator.
- Students are NOT permitted to bring into the examination room: blank sheets of paper and/or white out liquid/tape.

Materials supplied

- Question and answer booklet of 29 pages with a detachable sheet of miscellaneous formulas at the end of this booklet.
- Answer sheet for multiple choice questions.

Instructions

- Detach the formula sheet from the end of this book during reading time.
- Write your **student number** in the space provided above on this page.
- Check that your **name** and **student number** as printed on your answer sheet for multiple-choice questions are correct, and sign your name in the space provided to verify this.
- All written responses must be in English.

At the end of the examination

- Place the answer sheet for multiple-choice questions inside the front cover of this book.

Students are NOT permitted to bring mobile phones and/or any other unauthorised electronic devices into the examination room.

SECTION 1**Instructions for Section I**

Answer **all** questions in pencil on the answer sheet provided for multiple-choice questions.

A correct answer scores 1 mark, an incorrect answer scores 0.

Marks will **not** be deducted for incorrect answers.

No mark will be given if more than one answer is completed for any question.

Question 1

If $f(x) = g(x) \log_e(2x)$, $g\left(\frac{e}{2}\right) = \frac{e}{2}$ and $g'\left(\frac{e}{2}\right) = 1$ then $f'\left(\frac{e}{2}\right)$ is equal to

- A. 1
- B. $\frac{e}{2} + 1$
- C. $\frac{e}{2}$
- D. 2
- E. 3

Question 2

If $f(x) = \sin\left(\frac{1}{x}\right)$ for $x \neq 0$, then $f'(a)$ where $a \neq 0$ is given by

- A. $-\frac{\cos\left(\frac{1}{a}\right)}{a^2}$
- B. $\cos\left(\frac{1}{a}\right)$
- C. $\frac{\cos\left(\frac{1}{a}\right)}{a^2}$
- D. $\lim_{h \rightarrow 0} \frac{\sin\left(\frac{1}{a} + h\right) - \sin\left(\frac{1}{a}\right)}{h}$
- E. $\lim_{h \rightarrow 0} \frac{\cos\left(\frac{1}{a} + h\right) - \cos\left(\frac{1}{a}\right)}{h}$

Question 3

The average rate of change of the function with the rule $f(x) = x^3 + e^{2x}$ between $x = 0$ and $x = 2$ is equal to

- A. $\frac{8 + e^4}{2}$
- B. $\frac{7 + e^4}{2}$
- C. $12 + 2e^4$
- D. $5 + e^4$
- E. $10 + 2e^4$

Question 4

Given the function $f : \left[0, \frac{2\pi}{n}\right] \rightarrow \mathbb{R}$, $f(x) = a + b \sin(nx)$, where a , b and n are real constants. Which of the following is **FALSE**?

- A. f has a maximum at $y = a + b$ and occurs when $x = \frac{\pi}{2n}$
- B. f has a minimum at $y = a - b$ and occurs when $x = \frac{3\pi}{2n}$
- C. The range is $[a - b, a + b]$
- D. The graph of $y = f(x)$ consists of one cycle.
- E. The area bounded by the curve, and the co-ordinate axes is $\frac{2\pi a}{n}$

Question 5

The diagram above show the graph of $y = -x^2 + 3x - 3$ and the tangent to the graph at the point P , where $x = 3$. The tangent has the equation $y = mx + c$. The shaded area A is the area between the graph, the tangent and the y -axis. Which of the following is **FALSE**?

- A. $c = 6$
- B. $m = -3$
- C. $-3m + 6 = -3$
- D. $m < 0$ and $c > 0$
- E. $A = \int_0^3 (x^2 + (m-3)x + (c+3)) dx$

Question 6

If $f(x) = \frac{1}{x^2}$ then the best approximation to $\frac{1}{3.99^2}$ is given by

- A. $f(4) - 0.01f'(4)$
- B. $f(4) + 0.01f'(4)$
- C. $f(2) - 0.01f'(4)$
- D. $f(2) + 0.01f'(2)$
- E. $f(2) - 0.01f'(2)$

Question 7

Which of the following is **NOT** a measure of the area bounded by the graph of $y = x^2 - a^2$ and the x -axis?

- A. $\left| \int_{-a}^a (x^2 - a^2) dx \right|$
- B. $2 \int_{-a}^0 \sqrt{a^2 - x} dx$
- C. $2 \int_0^a (a^2 - x^2) dx$
- D. $\int_{-a}^a (a^2 - x^2) dx$
- E. $2 \left| \int_{-a^2}^0 \sqrt{x + a^2} dx \right|$

Question 8

If a is a real positive constant, then the inverse of the function

$f : \mathbb{R}^+ \rightarrow \mathbb{R}$, $f(x) = x^2 + a$ is

- A. $f^{-1} : \mathbb{R} \rightarrow \mathbb{R}$, $f^{-1}(x) = \frac{1}{x^2 + a}$
- B. $f^{-1} : \mathbb{R} \rightarrow \mathbb{R}$, $f^{-1}(x) = \sqrt{a} - \sqrt{x}$
- C. $f^{-1} : (a, \infty) \rightarrow \mathbb{R}$, $f^{-1}(x) = -\sqrt{x - a}$
- D. $f^{-1} : (a, \infty) \rightarrow \mathbb{R}$, $f^{-1}(x) = \sqrt{x - a}$
- E. $f^{-1} : (0, \infty) \rightarrow \mathbb{R}$, $f^{-1}(x) = \sqrt{x} - \sqrt{a}$

Question 9

If $f(x) = f(-x)$ and $\int_{-6}^6 f(x) dx = 10$, then $\int_0^6 (2f(x) - 1) dx$ is equal to

- A. 4
- B. 14
- C. 7
- D. $10 - x$
- E. $20 - x$

Question 10

The graph of the function $f(x) = x^2 \log_e |x|$ has

- A. a local maximum at $x = 0$ and local minimums at $x = \pm \frac{1}{\sqrt{e}}$
- B. local minimums at $x = \pm \frac{1}{\sqrt{e}}$
- C. a local minimum at $x = 0$
- D. a point of inflexion at $x = 0$
- E. a point of inflexion at $x = 0$ and local minimums at $x = \pm \frac{1}{\sqrt{e}}$

Question 11

Given the function $f(x) = b + \frac{a}{x-b}$ where a and b are non-zero real constants,

and $y = f^{-1}(x)$ is the inverse function.

Which of the following statements is **FALSE**?

- A. The graph of $y = f(x)$ has the line $x = b$ as a vertical asymptote and the line $y = b$ as a horizontal asymptote.
- B. The domain and range of both f and f^{-1} are $R \setminus \{b\}$.
- C. The inverse function $f^{-1} = f$.
- D. The graph of $y = f(x)$ passes through $\left(0, b - \frac{a}{b}\right)$ and the graph of $y = f^{-1}(x)$ passes through $\left(b - \frac{a}{b}, 0\right)$.
- E. The graphs of $y = f(x)$ and $y = f^{-1}(x)$ always intersect on the line $y = x$ at the points $(b \pm \sqrt{a}, b \pm \sqrt{a})$.

Question 12

A certain curve has its gradient given by $2 \cos\left(\frac{x}{2}\right)$. If the curve crosses the x -axis

at $x = \frac{5\pi}{3}$, then it crosses the y -axis at

- A. $-\frac{1}{2}$
- B. $\frac{1}{2}$
- C. -2
- D. $\frac{\sqrt{3}}{2}$
- E. 2

Question 13

A curve has a vertical asymptote at $x = a$ and a horizontal asymptote at $y = b$. Which one of the following could be the equation of the curve?

- A. $y = \frac{x-b}{x+a}$
- B. $y = \frac{x-b}{x-a}$
- C. $y = \frac{b}{x-a}$
- D. $y = \frac{bx}{x-a}$
- E. $y = b + \frac{1}{x+a}$

Question 14

Let $f : [0, \pi] \rightarrow \mathbb{R}$, $f(x) = 2 \cos\left(\frac{x}{2}\right) - 2$. The graph of f is transformed by a reflection in the x -axis, followed by a dilation of factor 2 from the y -axis, then a dilation by a factor of 3 from the x -axis. The resulting graph is defined by

- A. $g : [0, \pi] \rightarrow \mathbb{R}$, $g(x) = 6 - 6 \cos(x)$
- B. $g : \left[0, \frac{\pi}{3}\right] \rightarrow \mathbb{R}$, $g(x) = 4 + 4 \cos\left(\frac{3x}{2}\right)$
- C. $g : [0, 3\pi] \rightarrow \mathbb{R}$, $g(x) = 4 - 4 \cos\left(\frac{x}{6}\right)$
- D. $g : [0, 2\pi] \rightarrow \mathbb{R}$, $g(x) = 6 - 6 \cos\left(\frac{x}{4}\right)$
- E. $g : [0, 2\pi] \rightarrow \mathbb{R}$, $g(x) = 4 - 4 \cos\left(\frac{3x}{2}\right)$

Question 15

If $\Pr(A) = a$, $\Pr(B) = b$ and $\Pr(A \cap B) = p$ where $0 < a < 1$, $0 < b < 1$ and $0 < p < 1$, then $\Pr(A' \cap B')$ is equal to

- A. $1 - p$
- B. $1 - (a + b)$
- C. $1 - (a + b) - ab$
- D. $2 - (a + b) - (1 - a)(1 - b)$
- E. $1 + p - (a + b)$

Question 16

The function $f : (-\infty, a) \rightarrow \mathbb{R}$ with the rule $f(x) = x^4 - 4x^2$, will have an inverse provided that

- A. $a < 2$
- B. $a > 0$
- C. $a < \sqrt{2}$
- D. $a < -\sqrt{2}$
- E. $a > -\sqrt{2}$

Question 17

Anthony and Betty play n games of table tennis. The probability that Anthony wins any game is 0.4, no game can be a draw. If the probability that Betty wins no games is less than 0.01, then the minimum number of games they played is equal to

- A. 5
- B. 6
- C. 7
- D. 9
- E. 10

Question 18

If X is a normally distributed random variable with mean μ and variance $\frac{9\mu^2}{4}$, then $\Pr(X > 2\mu)$ is closest to

- A. 0.023
- B. 0.252
- C. 0.504
- D. 0.672
- E. 0.748

Question 19

Shown below is the graph of a function f .

Let $g(x) = \int_0^x f(t) dt$, then

- A. $g(0) = 1$ $g'(0) = 0$ $g'(3) = 0$
- B. $g(0) = 1$ $g'(0) = 0$ $g'(3) = 1$
- C. $g(0) = 0$ $g'(0) = 9$ $g'(3) = 0$
- D. $g(0) = 0$ $g'(0) = 9$ $g'(3) = 18$
- E. $g(0) = 0$ $g'(0) = 0$ $g'(3) = 0$

Question 20

The graph of $f(g(x))$ is shown.

The graphs of $y = f(x)$ and $y = g(x)$ are best represented respectively as

A.

B.

C.

D.

E.

Question 21

A regular hexagon, has each side length being L cm. The area A of the hexagon is given by $\frac{3\sqrt{3}}{2}L^2$. If each of the six sides of the hexagon increases at a rate of $\sqrt{3}$ cm/s, then the rate in cm^2/s at which the area of the hexagon is increasing, when the side lengths are $\sqrt{3}$ cm, is given by

- A. $9\sqrt{3}$
- B. 9
- C. $6\sqrt{3}$
- D. $\frac{9\sqrt{3}}{2}$
- E. $\frac{27}{2}$

Question 22

The random variable X has the following probability distribution.

X	-2	-1	1	2
$\Pr(X = x)$	$\frac{a}{2}$	a	b	$\frac{b}{2}$

Which of the following statements is **FALSE**?

- A. $3(a + b) = 2$
- B. $E(X) = \sum x \Pr(X = x) = 2(b - a)$
- C. $E(X^2) = 2$
- D. $\text{var}(X) = 2 - 4b^2 + 8ab - 4a^2$
- E. $E\left(\frac{1}{X}\right) = \frac{1}{2(b - a)}$

END OF SECTION 1

SECTION 2**Instructions for Section 2**

Answer **all** questions in the spaces provided.

A decimal approximation will not be accepted if an **exact** answer is required to a question.

In questions where more than one mark is available, appropriate working **must** be shown.

Where an instruction to **use calculus** is stated for a question, you must show an appropriate derivative or antiderivative.

Unless otherwise indicated, the diagrams in this book are **not** drawn to scale.

Question 1

Consider the function $f: R \rightarrow R$, $f(x) = x^3 - 3x^2 + cx + d$, where c and d are real numbers.

- a. The coordinates of the turning point on the graph of $y = f(x)$ are $(-1, 5)$ and (u, v) .
- i. Show that in this case $c = -9$, $d = 0$, $v = -27$ and determine the value of u .

3 marks

- ii. For what values of d does the graph of $y = x^3 - 3x^2 - 9x + d$ cross the x -axis at three distinct points?

2 marks

- b.** For what values of c and d does the graph of $y = x^3 - 3x^2 + cx + d$ have two distinct turning points?

2 marks

- c.** If the graph of $y = f(x)$ is translated p units to the left away from the y -axis, it becomes the graph of $y = x^3$. Find the values of p , c and d in this case.

3 marks

Question 2

The diagram below shows a “triangular” shade cloth, which is designed to block the direct sunlight onto a children’s playground. The cloth lies in a horizontal plane and has vertical posts erected at points O, A and B. The point O is the origin and the co-ordinates of the points A, P and B are $(8,0)$, $(4,1.5)$ and $(4,8)$ respectively. The axes are shown on the drawing and the units are in metres.

The curve OPA has the form $y = a \sin(nx)$.

- a. Explain why $a = 1.5$ and $n = \frac{\pi}{8}$.

1 mark

The curve OB has the form $y = 16(1 - e^{-kx})$.

- b.** Show that $k = \frac{1}{4} \log_e(2)$.

1 mark

- c.** The curve BA is the reflection of the curve OB in the line $x = 4$.

- i.** Write down **two** transformations, which take the curve OB into the curve BA.

1 mark

- ii.** Hence write down a **function** in terms of k , which describes the curve BA.

2 marks

Question 3

At a cinema, the time T minutes, that customers have to wait in order to buy their tickets has a probability density function given by

$$f(t) = \begin{cases} bt^2 & \text{for } 0 \leq t \leq 4 \\ c(8-t) & \text{for } 4 < t \leq 8 \\ 0 & \text{otherwise} \end{cases}$$

- a. Show that $b = \frac{3}{160}$ and $c = \frac{3}{40}$.

3 marks

- b. Sketch the graph of $y = f(t)$ on the axes provided, clearly labelling the scale.

1 mark

- c. Find the probability that a customer waits more than six minutes to buy a ticket.

2 marks

- d. Find the mean time that customers have to wait in order to buy their tickets, give your answer correct to one decimal place.

2 marks

- e. Find the median time, correct to two decimal places, that customers have to wait in order to buy their tickets.

3 marks

The running times of movies shown at the cinema are normally distributed with a mean of 94 minutes, with a standard deviation of 10 minutes.

- f.** Find the probability that the running time of a movie is more than 109 minutes, give your answer correct to three significant figures.

1 mark

- g.** A certain cinema complex has four different movies playing. Find the probability that at least two of the movies have a running time of more than 109 minutes, give your answer correct to three significant figures.

2 marks

Pete goes to the movies once every week. He likes to see only action or comedy movies. If he sees an action movie one week, the probability that he sees an action movie the following week is 0.45, while if he sees a comedy one week, the probability that he sees an action movie the following week is 0.35. Suppose he has just seen an action movie.

- h.** What is the probability that of the next three movies he sees, exactly two are comedies, give your answer correct to three decimal places.

2 marks
Total 16 marks

Question 4

The diagram below shows part of the graph of the function $f : (0, \infty) \rightarrow \mathbb{R}$ where $f(x) = \frac{4}{x^2}$.

Let $P(a, f(a))$ where $a > 0$ be a point on the graph of $y = \frac{4}{x^2}$.

- a. Show that the distance s from the origin O to the point P is given by $s = \frac{\sqrt{16 + a^6}}{a^2}$.

2 marks

- b i.** Find, using calculus the exact value of a , for which the distance s is a minimum.
There is no need to show that it is a minimum.

- ii.** Find the minimum distance, giving your answer correct to three decimal places. 3 marks

1 mark

- c.i.** Find in terms of a , the equation of the normal to the curve $y = f(x)$ at the point P .

2 marks

- ii.** Find the value of a , for which the normal passes through the origin.

1 mark

Total 9 marks

Question 5

Given the function $f : [0, 2\pi] \rightarrow \mathbb{R}$, $f(x) = \sqrt{3} \sin(2x) + \cos(2x)$.

a. Find $\{x : f(x) = 0\}$.

2 marks

b.i. Find $\{x : f'(x) = 0\}$.

3 marks

- ii. Find the exact coordinates of the maximum and minimum turning points on the graph of $y = f(x)$.

1 mark

- c. Sketch the graph of $y = f(x)$ on the axes below, clearly labelling the scale.

2 marks

- d. If $f(x) = A \sin(2(x + \alpha))$ state the values of A and α .

2 marks
Total 10 marks
