Question 8 (3 marks)

Let $\hat{P}$ be the random variable that represents the sample proportions of customers who bring their own shopping bags to a large shopping centre.

From a sample consisting of all customers on a particular day, an approximate 95% confidence interval for the proportion p of customers who bring their own shopping bags to this large

shopping centre was determined to be $\left(\frac{4853}{50000}, \frac{5147}{50000}\right)$.

- a. Find the value of $\hat{p}$ that was used to obtain this approximate 95% confidence interval.

2 marks

Question 9 (8 marks)

The diagram below shows a trapezium with vertices at $(0, 0)$, $(0, 2)$, $(3, 2)$ and $(b, 0)$, where b is a real number and $0 < b < 2$.
