Units 3 & 4 – Written examination 1

Reading Time: 15 minutes

Writing Time: 1 hour

QUESTION AND ANSWER BOOK

Structure of Book

<i>Number of questions</i>	<i>Number of questions to be answered</i>	<i>Number of marks</i>
8	8	40

- Students are permitted to bring into the examination room: pens, pencils, highlighters, erasers, sharpeners, rulers.
- Students are NOT permitted to bring into the examination room: notes of any kind, blank sheets of paper and/or white out liquid/tape, a calculator.

Materials supplied

- Question and answer book of 8 pages.
- Working space is provided throughout the book.

Instructions

- Print your name in the space provided on the top of this page.
- All written responses must be in English.

Students are NOT permitted to bring mobile phones and/or any other unauthorised devices into the examination room.

This page is blank

Instructions

Answer **all** questions in the spaces provided.

A decimal approximation will not be accepted if an **exact** answer is required to a question.

In questions where more than one mark is available, appropriate working must be shown.

Unless otherwise indicated, the diagrams in this book are **not** drawn to scale.

Question 1

- a. If $y = \frac{e^{2x}}{x^2}$ find $\frac{dy}{dx}$ in factorized form.

2 marks

- b. Consider $f(x) = (x + 1)\log_e(3x^2)$. Find $f'(2)$

2 marks

Question 2

Given $f'(x) = \sqrt{x-1} + 2e^x + \cos(x-1)$ and $f(1) = 0$, find $f(x)$.

2 marks

TURN OVER

Question 3

Solve $\log_2(2x) + \log_2(x + 1) = 4$

3 marks

Question 4

David has a $\frac{1}{3}$ probability of catching the early train to work every morning, otherwise he catches the later train.

- a. What is the probability David misses the early train four days in a row?

1 mark

- b. What is the probability David catches the early train on at least three of the next four days?

2 marks

- c. What is the probability David catches the early train on at least three of the next four days, given that he caught the early train at least once?

1 mark

Question 5

- a. Consider $y(x) = 2 \tan(3x)$ for $x \in [0, \pi]$ labelling all intercepts and asymptotes.

3 marks

- b. Solve $y(x) + 2 = 0$ over $x \in [0, \pi]$

3 marks

TURN OVER

Question 6

Consider $g: [a, \infty) \rightarrow \mathbb{R}, g(x) = \frac{1}{2}x^2 - 2x + \frac{3}{2}$

- a.** Complete the square for $g(x)$.

1 mark

- b.** Hence or otherwise, state a series of transformations that takes the graph of $y = x^2$ to $y = g(x)$.

2 marks

- c.** State the smallest value of a such that $g(x)$ is a 1:1 function.

1 mark

Let $h(x) = \sqrt{1 + 2x}$

- d.** Show that $h(g(x))$ is defined.

1 mark

- e.** State the rule for $h(g(x))$, assuming $x \geq 2$.

1 mark

Question 7

Consider $y_1(x) = -3x(x - 2)^2(x - 4)$ and $y_2(x) = -3x^2(x - 2)(x + 2)$.

- a.** State a single transformation that takes the graph of $y = y_1(x)$ to $y = y_2(x)$.

1 mark

- b.** Find the co-ordinates of the stationary points of $y_2(x)$.

2 marks

The area bounded by the x and y axes and the curve $y_1(x)$ is equivalent to $a \int_0^b y_2(x) dx$.

- c.** State the values of a and b .

2 marks

- d.** Hence find the area bounded by the x and y axes and the curve $y_1(x)$.

2 marks

TURN OVER

Question 8

Let $p(x)$ be a probability density function such that:

$$p(x) = \begin{cases} ax^2 \log_e(x) & 0 \leq x \leq 1 \\ 0 & \text{elsewhere} \end{cases}$$

- a. Show by differentiation that the antiderivative of $x^{n-1}(n \log_e(x) + 1)$ is $x^n \log_e(x) + c$, where $c \in \mathbb{R}$.

2 marks

- b. Hence or otherwise, find the value of a such that $p(x)$ is a probability density function.

3 marks

- c. Determine $E(X)$

3 marks
