Writing time: 1 hour

QUESTION AND ANSWER BOOK

Structure of book

<i>Number of questions</i>	<i>Number of questions to be answered</i>	<i>Number of marks</i>
9	9	40

- Students are permitted to bring into the examination room: pens, pencils, highlighters, erasers, sharpeners, and rulers.
- Students are NOT permitted to bring into the examination room: notes of any kind, a calculator, blank sheets of paper and/or white out liquid/tape.

Materials supplied

- Question and answer book of 10 pages.
- Working space is provided throughout the book.

Instructions

- Print your name in the space provided on the top of this page.
- All written responses must be in English.

Students are NOT permitted to bring mobile phones and/or any other electronic devices into the examination room.

This page is blank

Instructions

Answer **all** questions in the spaces provided.

A decimal approximation will not be accepted if an **exact** answer is required to a question.

In questions where more than one mark is available, appropriate working must be shown.

Unless otherwise indicated, the diagrams in this book are **not** drawn to scale.

Take the **acceleration due to gravity** to have magnitude $g \text{ m/s}^2$, where $g = 9.8$.

Question 1

- a. Let vectors $\mathbf{a} = \mathbf{i} - \mathbf{j} + 4\mathbf{k}$ and $\mathbf{b} = m\mathbf{i} + n\mathbf{j} - 2\mathbf{k}$ be the position vectors of points A and B relative to the origin. Find all possible values of m and n such that vectors $\mathbf{a}$ and $\mathbf{b}$ are perpendicular and $|\vec{AB}| = 2\sqrt{14}$.

4 marks

- b. The acute angle between the vectors $\mathbf{a} = \mathbf{i} - \mathbf{j} + 4\mathbf{k}$ and $\vec{AB} = 4\mathbf{i} - 2\mathbf{j} - 6\mathbf{k}$ is $\theta = \cos^{-1}\left(\frac{p}{q\sqrt{7}}\right)$. Determine the values of p and q , where $\frac{p}{q}$ is in simplest form.

2 marks

TURN OVER

Question 2

- a. If $z = i$ is a solution of the equation $z^3 - cz^2 + 3iz + 1 - i = 0$, show that $c = 2 + 2i$.

1 mark

- b. Find the other two solutions of the equation $z^3 - (2 + 2i)z^2 + 3iz + 1 - i = 0$.

4 marks

Question 3

Draw an accurate graph of $y = \frac{4}{\pi} \sin^{-1}(2x-1) + 3$. State the domain and the range and give the coordinates of the inflection point.

3 marks

Question 4

If $\tan \alpha = \frac{1}{12}$, $\tan \beta = \frac{2}{5}$ and $\tan \gamma = \frac{1}{3}$, where α, β and γ are acute angles, show that

$$\alpha + \beta + \gamma = \frac{\pi}{4}.$$

3 marks

TURN OVER

Question 5

Let $y^2 = xy - \log_e y$.

a. Find $\frac{dy}{dx}$.

2 marks

b. Find $\frac{dx}{dy}$.

2 marks

c. Use the results from part **a.** and **b.** to show that $\frac{dy}{dx} = \frac{1}{\frac{dx}{dy}}$.

1 mark

Question 6

The region bounded by the curve $y = \frac{x+1}{\sqrt{x^2-1}}$, the lines $y=0$, $x=2$ and $x=4$ is rotated about the x axis. Find the exact value of the volume of this solid of revolution.

[illegible]

3 marks

TURN OVER

Question 7

- a.** Differentiate $x \sin^2 x$ with respect to x .

1 mark

- b. Hence, find the exact value of $\int_0^{\frac{3\pi}{2}} x \sin(2x) dx$.**

[illegible]

4 marks

Question 8

The position of a particle at time t seconds is given by $\mathbf{r}(t) = e^{-2t}\mathbf{i} + (2e^t + 1)\mathbf{j}$, $t \geq 0$.

- a. Find the Cartesian equation of the path of the particle. State the domain and the range of the path.

3 marks

- b. Sketch the graph of the path. Label the asymptote(s) and end point(s).

2 marks

TURN OVER

Question 9

Three particles of masses 2kg, 4kg and 6kg are placed on a rough horizontal surface and are connected by two inextensible strings. A horizontal pulling force of 24 N is applied to the heaviest particle, as shown in the diagram. The coefficient of friction between the particles and the surface is $\mu = \frac{1}{10}$.

- a. Label the diagram above with all the forces acting in the system. Hence, show that the acceleration of the system is $a = 2 - \frac{g}{10}$.

3 marks

- b. Find the tensions between the particles.

2 marks
